

# Tract length distribution as a function of admixed sample's age (assuming single-pulse admixture at ~ 55 kya, tract length [0 bp, Inf Mb])

# Tract length distribution as a function of admixed sample's age (assuming single-pulse admixture at ~ 55 kya, tract length [25000 bp, Inf Mb])

# Tract length distribution as a function of admixed sample's age (assuming single-pulse admixture at ~ 55 kya, tract length [50000 bp, Inf Mb])

# Tract length distribution as a function of admixed sample's age (assuming single-pulse admixture at ~ 55 kya, tract length [1e+05 bp, Inf Mb])

# Tract length distribution as a function of admixed sample's age (assuming single-pulse admixture at ~ 55 kya, tract length [250000 bp, Inf Mb])
